Course and Instructor Evaluation

Past research shows that the students' answers to any one question can be noisy, more prone to biases, and provide less useful data for evaluating courses and instructors. Since interpreting individual questions, including their relative highs and lows, can easily lead to inaccurate conclusions due to low reliability, individual question responses are not available in any standard report.

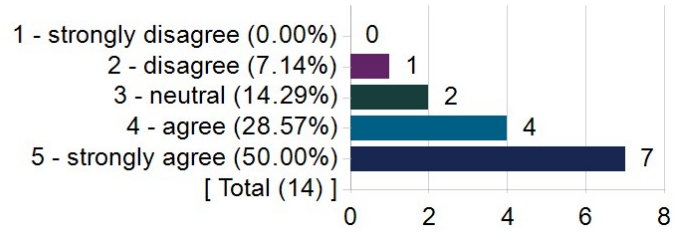

However, combining students' responses to several questions aimed at measuring the same underlying attribute can improve the quality of the measures. Therefore, the statistics displayed for each attribute (mean, median, mode, and standard deviation) are calculated from the grouped responses to all the questions in each topical block.

All questions below use a 5-point response scale: 1-strongly disagree to 5-strongly agree

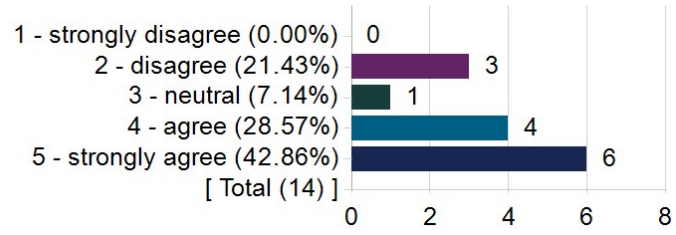

Learning

Competency Statistics	Value
Mean	3.89
Median	4.00
Mode	5
Standard Deviation	1.12

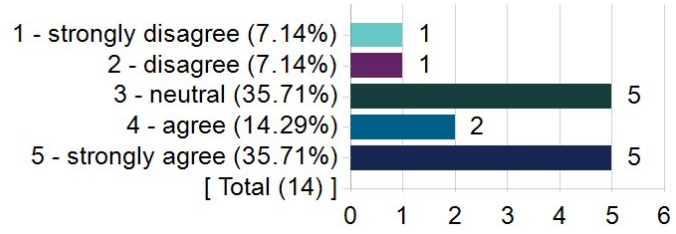

1. I have found the course intellectually challenging and stimulating

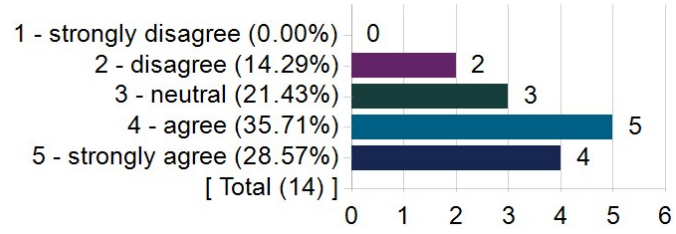

2. I have learned something which I consider valuable

3. My interest in the subject has increased as a consequence of this course

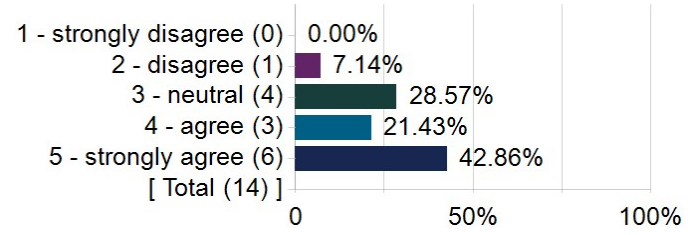

4. I have learned and understood the subject materials of this course

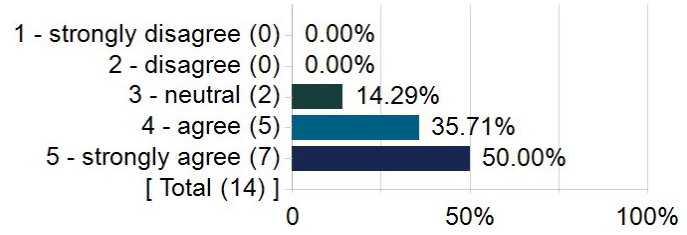

Organization

Competency Statistics	Value
Mean	4.20
Median	5.00
Mode	5
Standard Deviation	0.98

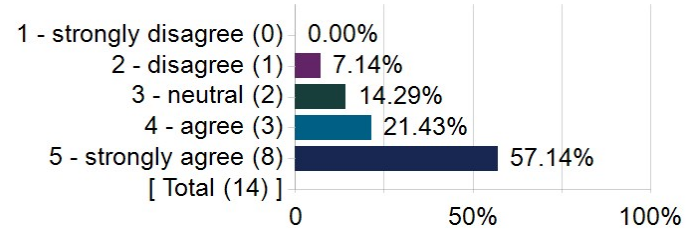

1. Instructor's explanations were clear

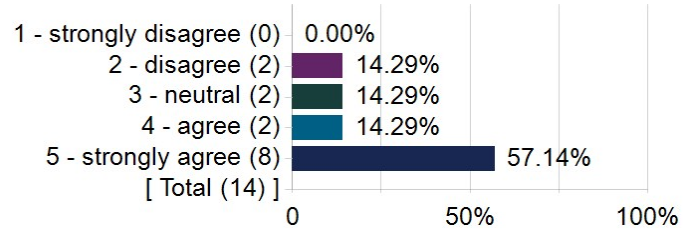

2. Course materials were well prepared and carefully explained

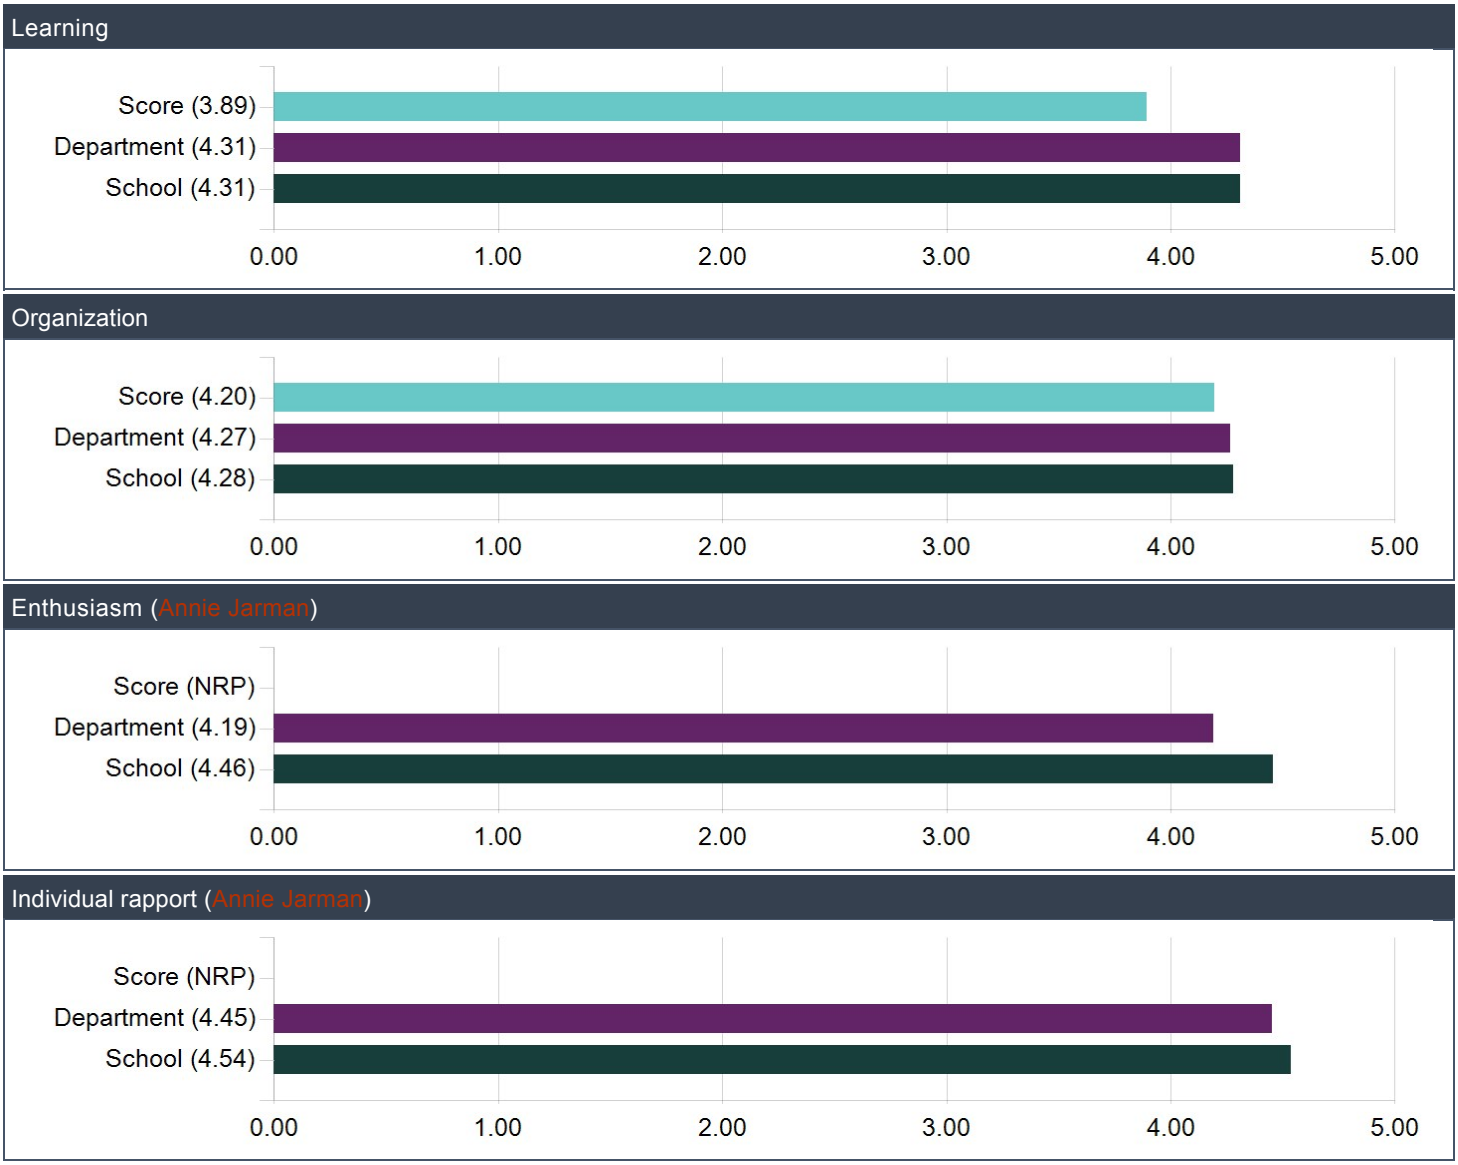

3. Proposed objectives agreed with those actually taught so I knew where the course was going

4. Instructor gave lectures that facilitated taking notes

Statistics	Value
Mean	4.21
Median	5.00
Mode	5
Standard Deviation	1.05

Where relevant, please give specific examples to explain your answer above.

Comments
The instructor posted all notes online ahead of class, which greatly helped in keeping track of the notes during class. Additionally, he posted all of the course reading online ahead of time in a Box folder, which made finding all of the class readings very easy.
There was little outside technology outside of canvas.

Short Answer Responses

What would you like to tell other Wash U students thinking about taking this course?

Comments
I think it's a great course, but especially for those who are passionate about Political Science
It is a broad overview of the development of the US Constitution, but does a great job looking at case studies as opposed to getting bogged down in the text itself. Professor Calvert is clearly passionate about the course and does a great job bringing the material to life.
It's very hard to get a clear narrative from this course. You jump all over the place chronologically which can be expected for a course about the development of the constitution but at the same time it was very hard to see a concise logic to the items discussed in the course. The lectures were just the professor explaining bullet points off of a list, but his explanations were steeped in his deep knowledge of the bullet points rather than in the context necessary to help students learn.
The Professor is super knowledgeable and very kind and willing to help students any time.
This course often felt exhausting in terms of going over the same content from the readings and lectures multiple times but still in terminology that was hard to understand. I found myself having a hard time paying attention even though this is something that interests me because lectures got hard to follow and were not super engaging. The professor is great and clearly loves this topic but I often lost focus due to the purely lecture nature and then lost the thread of discussion. Also guidelines for papers were not particularly clear especially at the beginning.
It's a fun course with a great teacher. It's a little vague in its goals, but if you get the Phantoms book and read that at the beginning of the course you'll understand where you are supposed to be going.
The bi–weekly essays are worth a large percentage of the grade. Make sure you do them well every time.

Describe at least one activity (an exercise, project, assignment, etc.) in this course that helped you learn.

Comments
The only activities were weekly papers, so those went over various content over the semester
The essays were appreciated as applications of the knowledge.
Bi–weekly short essays were conducive to reading in depth into a topic about american constitutionalism
The routine assignments helped me stay on track and build on my knowledge.
It was helpful to have a shorter paper as a trial run at the beginning so we could see how they would be graded.

Describe at least one thing that could be changed about this course to help you learn.

Comments
Sometimes it felt like we were jumping around from one topic to the next. A little more explanation of why were looking at what were and how it fit into the broader course is something I would have found beneficial. There were occasions where you would talk about things in ways that assumed background knowledge I did not have. More mindfulness about this in the future may be beneficial.
To explain things with a little more context, because although intro gov is required for the class, more context would have been helpful
The final prompt was a little to broad and scattered in my opinion, but I appreciated the framing of the prompt.
– Better class notes, not just bullet points, please incorporate audiovisual material to make it engaging – Better lecturing, please provide adequate context for what you are talking about, class would start on one thing and 5 minutes later be about something seemingly completely unrelated or not comprehensible to undergraduate political science students – Better prompts for the essays and better/more responsive grading and interpretation of student writing
I think the way the information is presented is sometimes hard to follow. Instead of a word doc, maybe slides or more discussion time would be helpful.
There could be way more engagement during lectures. It is really hard to sit for that long and just listen so having discussion breaks or activities of some form would be super helpful to retain attention and also to understand the material.
Being more clear about what we were supposed to be building towards in terms of learning. Things were quite murky up until the latter half of the course.
I think there could be more homework assignments that are each worth a lower proportion of the grade. This would help learning the material.

Describe at least one aspect of how this course was designed and carried out (the organization, structure, communication, etc.) that contributed to your success.

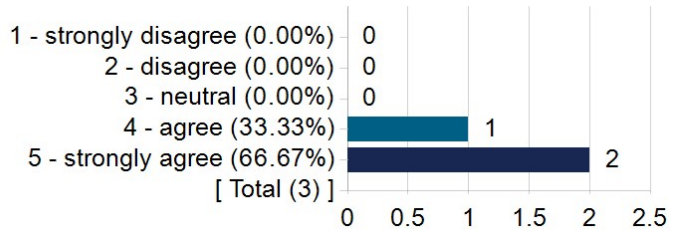

Comments
The bi–weekly essay structure
Posting the notes online is really appreciated.
Canvas was organized well.
It was nice having a week off between essays so that it didn't feel overwhelming.
I liked the way Calvert put notes up beforehand and followed the notes structure well. After reading the material and looking at the notes, you are well prepared.

Comments
The only "interaction" I had with her was she graded one of my essays, and I found her feedback to be more rude than helpful
Grading was somewhat ambiguous, specifically, in the sense that little feedback was given as to why so many points were taken off. For example, you can't say a single paragraph is bad and then proceed to take off 15% from a paper. The weekly announcements with the checklists were helpful AFTER the fact, but the feedback on the essays themselves seemed relatively vague at times.
Was disappointed with the way essays were criticized and feedback was offered, seemed to just be checking boxes off of a rubric rather than evaluating whether argumentation was sufficient
I really appreciated what detailed feedback we got on weekly essays. It made it a lot easier to understand where I was going wrong and improve on a week by week basis.
I didn't even see her in class. Basically no interaction outside of grading weekly essays.
Harsh and unclear grading standards. Not generally a big part of class.

Comments
It was inconvenient for readings to be linked in the syllabus and then have to download each one individual as opposed to them already being uploaded as PDFs on Canvas like in other classes.
The organization of modules was incredibly helpful and everything was easy to find.
She did not upload her slides on Canvas prior to or after lecture, and she moved very quickly through slides, not making it so that everyone had notes down, so there was no way to access slides that you did not get to fully copy down with out asking for the specific slide from professors who did not respond in a timely manner.

Short Answer Responses

What would you like to tell other Wash U students thinking about taking this course?

Comments
– tests are tough... need to be very thorough in a short amount of time – consistently check the course page for wikipedia stuff and read the instructions
Don't take this unless you really like data and political science. Also, emails with the professor are not always returned...
I took this class because the professor gave a guest lecture in another class I took. She is incredibly engaging, and you will not be bored. The exams are challenging, but if you attend class, take notes, and do the readings (basically engage with all the requirements), you'll do okay. Past the professor and engaging presentation, the flipped classroom technique for the Wikipedia project is incredibly annoying. At first, the class seems doable, and it is, but a lot of points can get docked for technicalities on the wiki project. For instance, putting a peer review response in slightly the wrong place even though they look the exact same, and I made my case — I still didn't get the points back. This docked my grade a lot and could be the difference between an A and an A– for me. Ultimately, this assignment was more a thorn in my side (and I think other classmates) than work I learned something from.
I could not recommend this class more! Dr. O'Brien is one of the best professors I've ever had. I learned so much in this class and wish I had more chances to be taught by Dr. O'Brien.
Don't take this if your are taking it for polisci... it is taught like a WGSS class
Don't take it. While the topic is incredibly interesting, it is not worth it. Professor O'Brien does not give clear instructions and has unrealistic expectations for what her students can accomplish in the amount of time allotted for an exam. One time, Professor O'Brien gave nearly half of the class a 60 (worth 10% of our total grade) because her instructions were unclear. The 60% was not for unimpressive work – rather, 40% of the grade was deducted because nearly half of the class put part of the assignment in the wrong place (because the instructions were unclear). Even though this was her error, and if nearly half of the class committed a minor infraction such as pasting something into the wrong subheader on the Wikipedia page (which is already difficult to navigate, especially when it had never been explained or walked through in class)) our grades should not all suffer because of it, Professor O'Brien refused to be accommodating. In terms of grading more broadly, things seemed flippant, in terms of what was graded based upon completion and what was graded upon substance of content. The grading rubrics (when given) were often unclear, and it was difficult to determine where points could have been lost. Professor O'Brien also made it seem as though she did not give the TA a clear rubric, which made it seem as though there was no consistency about grading. Professor O'Brien also cold–calls, so be prepared for that if you do decide to take the class. However, she will not tell you at the beginning of the semester that she cold–calls, and participation is not worth anything in your grade. Her cold–calling is not to help keep your participation grade up – it is to call you out if she thinks you are not paying attention. Professor O'Brien is also difficult to reach over email. At times, it can take several days and follow–up emails to get a response. This class also lacked attention to intersectionality, but Professor O'Brien rarely acknowledged this. It is worth noting that this was my only class that did not have the option of a midterm course evaluation. If a WashU student really wants to take the course because they are interested in learning about the material, they can audit the class. But it is not worth it to enroll in a course which is not designed to see student success, and I would discourage any student from taking this course in the future.
The topics are really interesting and the professor is great
Avoid taking this course. My interest in Gender and Politics has significantly decreased as a result of Professor O'Brien and her discouraging attitude toward students. I felt dehumanized as a result of her frankly inappropriate behavior and unwillingness to listen to student feedback. The course materials were interesting, but the structure of the class allowed for no constructive dialogue or digestion of material. The grading was exceptionally arbitrary and unfair. No clear rubric was provided for any course assignment and meaningful feedback about opportunities to improve was sparse.

Describe at least one activity (an exercise, project, assignment, etc.) in this course that helped you learn.

Comments
lectures
Nothing...the Wikipedia project did NOT help me learn. Expectations were not clear for the project at all. It would have been more helpful for us as a class to go over the timeline for the assignments at some point earlier in the class as well as spend some time in class showing us how to navigate the dashboard because it is not intuitive at all. Also, it was very unclear especially at the beginning since the due dates on the dashboard did not align with due dates on the Canvas page. Also, the technical details you had to learn for Wikipedia project were a hassle and made the whole thing much more challenging and frustrating than it needed to be, I would have preferred a traditional research paper.
The Wikipedia project was actually really cool and I feel like I learned a ton
all of the assignments including the Wikipedia project were too specific and has high point values for small mistakes
The zoom review session prior to the first exam was a very helpful tool to help me study and test myself.

Describe at least one thing that could be changed about this course to help you learn.

Comments
more in–class communication about the wikipedia project and not having conflicting deadlines on canvas and the wiki course page
I wish the lecture slides had been posted after class so that I could review the notes on my own time, especially since there were so many graphs, charts, and tables that take me a longer time to understand.
Maybe ditch the Wiki project. In theory, it's a great idea, but it is possible to do it another way. For instance, take a class to go over everything. Because there wasn't any in–class instruction, it was complicated for me to understand everything (especially as someone who struggles with technology)
adding slides to canvas
The Wikipedia project was confusing and I think I would have found it more valuable if we had more guidance. I also think the course would benefit from more rubrics, slides being posted, at least one more test, and more explanation of assignments.
I did not like the Wikipedia project
More discussion–oriented lecturing and less passive–aggressive communication from the Instructor and AI. Clear rubrics should be provided before assignments and exams. Cease using the confusing interface of Wikipedia and provide ample support to students if this project continues.

Describe at least one aspect of how this course was designed and carried out (the organization, structure, communication, etc.) that contributed to your success.

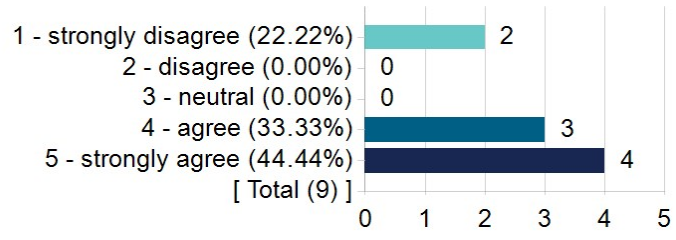

Comments
test reviews
Nothing...I understand that the syllabus is always subject to change, but it is helpful when professors tell students that some of the readings have been moved around or whatever, but that did not happen in this class.
The exam structure of the class was challenging, but I learned a lot from it. Overall, I feel satisfied with my experience.
Her syllabus was always updated and her slides were full of information and very easy to take notes on
I liked that the readings were directly relevant to the material we learned in class, but class was also not just a repetition of the readings.

Please provide any additional feedback on Annie Jarman that was not covered by the previous questions.

Comments
really hard grader
Grading procedures for the Wikipedia project were not clear.
Grading procedures were fair, but the number of points taken off for technicalities didn't quite make sense. I feel more should be weighted on the actual work done. Besides that, she was very helpful in figuring out concepts, and her presentation was one of my favorites of the year, if not my favorite.

Danforth Question

The course Canvas page or website could be easily navigated to find course materials.

Comments
She was very kind, but not that present in the course.
N/A – I did not interact with her once throughout the semester (I didn't realize this course had an AI).
Grading at times seemed relatively inconsistent and random, thought she could have provided much more context and reasoning for why she graded the way she did.
